No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                         The present sequence encodes a mammalian serine racemase, which has a specific activity of at least 0.003 micromole L-serine/mg/hour. The enzyme catalyses the direct racemisation of L-serine to D-serine. D-serine appears to be an endogenous ligand of N-methyl-D-separate (NMDA) receptors. The mammalian serine racemases can be used to identify medulators, which can be used in the treatment of acute or chronic neural death or dysfunction mediated by overactivation of N-methyl-D-separate (NMDA) receptors. Overactivation of the receptors is associated with Parkinson's disease, Huntington's disease, motor neurone
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     360

          The present sequence encodes a mammalian serine racemase, which has a specific activity of at least 0.003 micromole L-serine/mg/hour. The enzyme catalyses the direct racemisation of L-serine to D-serine. D-serine appears to be an endogenous ligand of N-methyl-D-aspartate (NMDA) receptors. The mammalian serine racemases can be used to identify modulators, which can be used in the treatment of acute or chronic neural death or dysfunction mediated by overactivation of N-methyl-D-aspartate (NMDA) receptors. Overactivation of the receptors is associated with Parkinson's disease, Huntington's disease, motor neurone
                                                                                                                                                                                                                   09

The enzyme catalyses the direct racemisation of L-serine to D-serine. D-serine appears to be an endogenous ligand of N-methyl-D-aspartate (NMDA) receptors. The mammalian serine racemases can be used to identify modulators, which can be used in the treatment of acute or chronic aspartate (NMDA) receptors. Overactivation of N-methyl-D-aspartate (NMDA) receptors. Overactivation of the receptors is associated with Parkinson's disease, Huntington's disease, motor neurone
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Mammalian serine racemase preparations, used to identify modulators which can be used to treat diseases associated with N-methyl-D-aspartate receptor overactivation, e.g. Alzheimer's disease

human serine relates to a recombinant polynucleotide encoding a human serine racemase, vectors containing it, host cells expressing the zacemase, methods of identifying inhibitors of serine racemase and a transgenic animal lacking a functional endogenous serine racemase and cracemase, methods of identifying inhibitors of serine racemase and transgenic animal lacking a functional endogenous serine racemase comprising the human serine racemase of the invention. The racemase comprising the human serine racemase of protein, and in structural studies of the protein and sassays to identify compounds that inhibit or stimulate enzyme activity, in the generation of antibodies against the polymentis, and mutant or polymorphic forms of the serine racemase consistents, and mutant or polymorphic forms of the serine racemase (e.g. for neurological diseases such as Parkinson's and Huntingdon's disease, anxiety, glaucoma, stroke, hyperalgesia, pain, spinocerebellar ataxia and sofizophrenia), and would be useful for screening for modulators and/or inhibitors of serine racemase function. The polynucleotides are useful case protein, and as primers for nucleic acid amplification based assays for the detection of polynucleotides encoding cancemase protein. The transgenic animal is useful for the study of the tissue and temporal specific expression or activity of the serine racemase gene in an animal. The gene for human serine racemase is
                                                                                                                                                                                          Human; ss; serine racemase; Parkinson's disease; Huntingdon's disease; anxiety; glaucoma; stroke; hyperalgesia; pain; spinocerebellar ataxia; schizophrenia; transgenic animal; chromosome 17p13.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New recombinant serine racemase polypeptide, useful in assays for identifying compounds that alter enzyme activity (e.g. including compounds that inhibit or stimulate enzyme activity) or in generating antibodies against the protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Score 807.8; DB 22; Length 1023;

The present invention describes primer sets for synthesising 5602 full-length cDNAs defined in the specification. Where a primer set comptrises: (a) an oligo-dT primer and an oligounclectide complementary to the complementary strand of a polynuclectide comprises one of the 5602 nucleotide sequences defined in the specification, where the oligonuclectide comprises at least 15 nucleotides; or (b) a combination of an oligonuclectide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end sequence and an oligonuclectide comprising a sequence complementary to a polynucleotide which comprises a 3'-end sequence. Sequence complementary to a journucleotide comprises a 1-end sequence, where the oligonucleotide comprises a 1-end sequence, selected from those defined in the 5'-end sequence/3'-end sequence is selected from those defined in the 5'-end sequence/3'-end sequence is selected from those defined in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by chefull-length without any specialised methods. Gree AAM50262). The polynucleotide can be used in the production of recombinant serine racemase enzyme, or for the detection of serine racemase enzyme, or for the detection of serine racemase enzyme, or for the detection of serine racemase polynucleotides. Expression vectors and host cells are claimed. Serine racemase arabyses the conversion of L-serine to D-serine. Neuron damage following various nervous system diseases is often caused by activation of gultamate N-methyl-D-aspartate (NMDA) receptors in the brain. This receptor is activated by the binding of D-serine. Regulation of D-serine levels through the regulation of serine racemase may therefore prevent or minimise neuron damage in neurogenic and myopathic disorders, neuron damage in neurogenic and myopathic disorders and Parkinson's disease, and disorders leading to peripheral and enrondegenerative disorders such as Alzheimer's disease and Parkinson's disease, and disorders leading to peripheral and chronic pain. Serine racemase polypeptides and polynucleotides are used in claimed methods of screening for agents that modulate or decrease the activity of serine racemase polynucleotide, or a reagent that modulates serine racemase enzyme activity. This is used to modulate serine racemase enzyme activity. This is used to modulate an enrodegenerative disease caused by the over- or under-activation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention describes primer sets for synthesising 5602 full-length cDNBs defined in the specification. Where a primer set comprises: (a) an oligo-dT primer and an oligonuclectide complementary to the complementary strand of a polynuclectide which comprises one of the 560 nucleotide sequences defined in the specification, where the oligonuclectide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprising a sequence complementary to the
                                                                                                                                                                                                                                                                   full-length cDNAs defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs -

                sequence and an oligonucleotide comprising a sequence complementary to a polynucleotide which comprises a 3'-end sequence, where the oligonucleotide comprises a 1'-end sequence, where the comprises a 1'-end sequence, where the complementary is a 1'-end sequence, where the specification. The primer sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs casily without any specialised methods. AAH03166 to AAH13628 and AAH13639 to AAH13632 to AAH13632 to AAH13632 to AAH13632 and AAH13633 represent human amino acid sequences; and AAH13632 represent oligonucleotides, all of which are used in the exemplification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           188
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        368
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   360
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             428
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  480
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        608

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to novel genes (ABL89449-ABL90853) and proteins (ABB89040-ABB90044) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the genes are in the nucleic acids, proteins, antibodies and (ant)agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune discorders e.g. Addison's disease, allergies, autoimmune haemolytic anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease, multiple sclerosis, rheumatoid arthritis and ulcerative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and epilepsy; and (f) infectious diseases such as viral, bacterial, fungal and parasitic infections.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Novel 1405 isolated polypeptides, useful for diagnosis, treatment and prevention of neural, immune system, muscular, reproductive, gastrointestinal, pulmonary, cardiovascular, renal and proliferative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       (c) cardiovascular disorders such as myocardial ischaemias;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            DB 24; Length 731;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Claim 4; SEQ ID NO 684; 2081pp + Sequence Listing; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     1 ATGIGICCICAGIACTGCATCICCTITGCTGATGITGAAAAAGCTCATATCAACAITCAA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              direct racemisation of L.Serine to D.Serine. D.Serine appears to be an endogenous ligand of N-methyl-D-aspartate (NMDA) receptors. The mammalian serine racemases can be used to identify modulators, which can be used in the treatment of acute or chronic neural death or dysfunction mediated by overactivation of N-methyl-D-aspartate (NMDA)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present sequence represents a fragment of a mammalian serine racemase gene. The racemase polypeptide has a specific activity of at direct 0.003 micromole L'serine/mg/hour. The enzyme catalyses the direct racemisation of L-serine to D-serine. D-serine appears to be an endogenous ligand of N-methyl-D-aspartate (NMDA) receptors. The mammalian serine racemases can be used to identify addulators, which can be used in the treatment of acute or chronic neural death or dysfunction mediated by overactivation of N-methyl-D-aspartate (NMDA) receptors. Overactivation of the receptors is associated with Parkinson's disease, Huntington's disease, motor neurone disease and Alzheimer's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              676 CTGACCCCCAATCTTCATCCTCCAGAAACCATAGCAGATGGTGTCAAAATCCAGCATTGGC

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   776
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              716
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           513
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             514 AACCAGGTTCCCTTGGTAGATGCACTGGTGGTACCAGTAGGAGGAGGAGGAATGGTTGCT 573
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present sequence is one of a large number of 5' ESTs derived from mRNAs encoding secreted proteins. No ORF has yet been conclusively identified within the present sequence. The 5' ESTs were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dT primed cDNA libraries. Such ESTs are not well suited for isolating cDNA sequences derived from the 5' ends of mRNAs and even in those cases where longer CDNA sequences have been obtained, the full 5' UTR is rarely included. S. ESTs are derived from mRNAs with intext 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs. 5' ESTs are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures.
                                                                                                                                                                                                                                                                                                                                                                                 Human; 5' EST; expressed sequence tag; secreted protein; cDNA isolation; gene therapy; chromosome mapping; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      394 GACGAGTCCAGAGAAAGGTCACTCAAAGAATTATGCAAGAAACAGAAGGCATCTTGGTC

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     (ABB1678-ABB18001) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant)agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the adrend gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's disease, allergies, autoimmune hamolytic anaemia, autoimmune thyroiditis, diabtes mellitus, Crohn's disease, multiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c) cardiovascular disorders such as myocardial ischaemias; (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and parasitic infections.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              13254

This sequence represents one of 5191 Staphylococcus aureus DNA sequences of the invention. The DNA sequences are recorded on a computer readable medium, preferably selected from a floppy or hard disk, random access memory (RAM), read-only memory (ROM) or CD-ROM. Homology searches using the S.aureus DNA sequences allows putative functions to be assigned so that protein-encoding or regulatory regions of commercial, therapeutic or industrial importance can be obtained. Specifically, sequences which are likely to encode antigens have been identified and these polypeptides can be used in a vaccine composition against S.aureus infection. The be used in a vaccine composition against S.aureus infection of S.aureus in a sample. S.aureus is implicated in numerous human diseases, including cellulitis, eyelid infections, food poisoning, osteomyelitis, skin and surgical wound infections, scalded skin syndrome, toxic shock syndrome, etc. Organisms transformed with the DNA sequences can be used for recombinant production of the polypeptides. The new DNA sequences C fond their fragments) are useful as primers or probes for isolating commenced to the committee of the S.aureus DNA sequences contained on the Claim 1; Page 452-469; 3271pp; English. computer readable medium. anti-S.aureus vaccines
